

Galloway Calves

### *Reproductive Efficiency*

Cattlemen are attracted to the Galloway because they calve easily and rebreed early. Research done at the Meat Animal Research Centre, Nebraska, found that the Galloway had the highest weaning percentage, the highest calf survival percentage and an outstandingly low incidence of calving difficulty (0.8%).

### *Superior Mothering*

Galloway cows are renowned for their ability to care for their calves. They will produce a sufficient supply of rich milk to wean a large healthy calf.

### *High Calf Survival*

Galloway calves display a superior will to live. These spunky calves are hardy and disease resistant. This along with the cows' attributes result in a high percentage of healthy weaned calves which adds up to profit.

### *Calf Survival (Percentage)*
